# SYRIS = Earlier detection and immediate response to outbreaks

- Exposure: People/Animals are exposed to infectious agents
- Epidemic: People/Animals begin to show signs of infection
- Outcome: People/Animals begin to die or get very sick
- SYRIS Outcome: 80% fewer People/Animals get sick or die

# Data Processing and Assimilation

The University of New Mexico

# Assimilation vs. Fusion

**Assimilation**: The process of replacing selected static parameters in an Earth system model with digital pixel values from Earth observation data sets to improve the model's performance and convert it into a more dynamic (forecasting) form without changing the model's intended purpose.

**Fusion**: The process of including EO image products (at any of several levels of processing) into a GIS architecture in such a way that the datasets, both vector and raster, are geospatially registered at a specified scale. This usually requires sub-setting, re-projection and rescaling of fused data.

# Steps in Assimilation

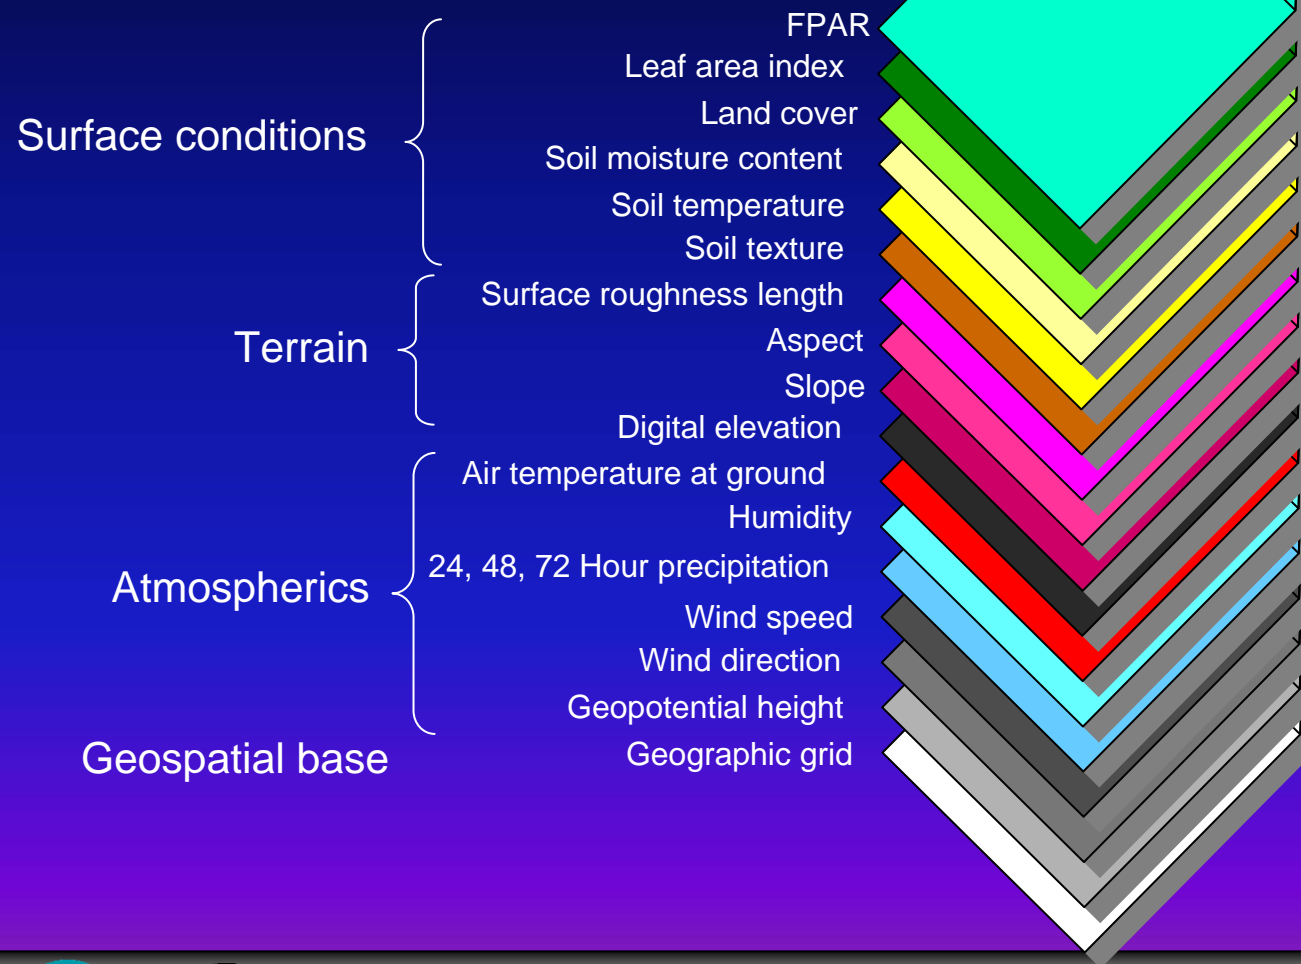

- Assess metadata & attributes of current model inputs and of possible EO inputs
  - Measurement units
  - x,y,z Resolution
  - Temporal frequency
  - Projection
  - File formats
  - Validity & accuracy
  - Error & error propagation
- Select EO inputs based on highest perceived benefit for enhancing model output
- Replace model input with EO data and compare model outputs
- Iterate with successive EO inputs
- Measure improvements at each stage and document overall performance improvements

# The Baker's Rack

Aims are to: (1) replace selected trays in the rack with regularly refreshed EO digital data from the "terrain." "surface conditions," and "atmospheric" parameters that drive DREAM; (2) improve model output without altering the validity of the model's original function; and (3) convert the model to a more dynamic forecast.

# Client Interface Prototype: Time Series

The screenshot displays the PHAIRS Dust Modeling Client interface. The main window is titled "PHAIRS Dust Modeling Client" and "72 hr Dust Model for Lubbock, TX (PM 2.5)". It features a map of the western United States with a red arrow pointing to Lubbock, TX. A "Dust Animation Key" is provided, showing AQI levels from 1 to 6. A "Dust Concentration Plot" shows the Air Quality Index Level over 72 UTC hours, with a peak of 6 at approximately 19 hours. The interface includes a "Select a Time Series Target" dropdown set to "DREAM 72-hour Dust - PM 2.5" and a "Select a City" dropdown set to "Lubbock, TX". A "Generate PDF of Current Animation Step" button is visible at the bottom right.
